Owerri, Nigeria (WAT / UTC+1) · Open to contract and remote roles worldwide · full EU/UK overlap, afternoon US Eastern overlap

PROFESSIONAL SUMMARY

Backend-oriented full-stack developer and B.Tech Software Engineering undergraduate (FUTO) who designs, builds and runs secure production web platforms. Currently the contract Full-Stack Web Developer and Website Administrator for a secondary school, operating its result and computer-based testing portals. Strongest in APIs, PostgreSQL, authentication and C++ tooling. Async-first and documentation-driven, with a disciplined Git pull-request and code-review workflow.

SERVICES

- **School and institutional portals:** role-based result, exam (CBT) and records platforms with PIN access, QR-verifiable documents, CSV export and email notifications.
- **Backend and REST APIs:** Node.js and Express services on PostgreSQL or Supabase, with JWT authentication, role-based access, TOTP 2FA and transactional workflows.
- **Full-stack web applications:** responsive React 18 and Vite front ends, deployed on Cloudflare or Netlify.
- **Website administration:** hosting, deployments, security updates and ongoing maintenance of live production sites.
- **Developer tooling:** TypeScript query libraries, schema codegen and C++20 command-line security tools.

WORK EXPERIENCE

Full-Stack Web Developer & Website Administrator 2025 – Present

Sherman Nagel Adventist High School, Owerri, Nigeria · Contract

- Designed, built and deployed the school's production Result Portal (React 18, Vite, Node.js, Express, Supabase, Cloudflare): teachers enter scores, administrators manage records, and students redeem scratch-card PINs, with printed results verifiable by QR.
- Built the Computer-Based Testing portal for timed, shuffled exams, with Exam ID and PIN sign-in, scoped admins over questions, schedules and results, violation logging, automatic expiry of stale sessions and controlled retakes.
- Secured both platforms with role-based access control, JWT cookies, bcrypt hashing, optional TOTP 2FA, account lockout and session revocation.
- Administer the school website and run both platforms in production: hosting, deployments, uptime and ongoing updates; still actively maintaining the website.

PROJECTS

pg-fluent - PostgreSQL Query Library (Open Source)

TypeScript · Node.js · PostgreSQL · node-postgres

- Supabase-style fluent query builder that reuses the postgrest-js contract but translates each request into a single parameterized SQL statement executed through node-postgres - the same { data, error } shape without the HTTP hop or JSON re-serialization.
- Codegen CLI derives TypeScript types from a live database schema; a differential test suite asserts parity with PostgREST; ships with benchmarks, observability hooks, LISTEN/NOTIFY and GeoJSON support.

Sherman Nagel Result Portal - School Result Platform (Production)

React 18 · Vite · Node.js · Express · Supabase · Cloudflare

- Role-based results infrastructure for teachers, administrators and students; printed results are verifiable by QR.
- JWT cookies, bcrypt, optional TOTP 2FA, account lockout, and session revocation; publication-safe edits and transactional end-of-session promotion with explicit placement reporting.

Sherman Nagel CBT Portal - Computer-Based Testing (Production)

React 18 · Vite · Node.js · Express · Supabase · Cloudflare

- Exam ID and PIN sign-in showing only assigned subjects, with scoped admins over questions, schedules and results.
- Twelve tables and 28 API endpoints covering candidates, attempts, answers and violations, with CSV result export.

GitHub Secrets Watcher - Security CLI Tool

C++20 · libcurl · Git · JSON · ANSI Colors

- Read-only CLI that scans full Git history for accidentally committed secrets, diffing each commit against its first parent so cost scales with what changed; cached clones with incremental fetches; ranked findings with validated links to the exact commit.

TECHNICAL SKILLS

Languages: C++ (C++20/23) · JavaScript · TypeScript · HTML5 · CSS3
Web Engineering: React 18 · Vite · Node.js · Express · REST APIs · Responsive Design
Data & Security: Supabase · PostgreSQL · SQLite · JWT · Argon2id · bcrypt
Practices: Git & GitHub workflow · code review · technical documentation · unit & differential testing · secure-by-default design
Tools & Deployment: Docker · Cloudflare Workers · Netlify · Linux · Visual Studio 2022

EDUCATION

B.Tech Software Engineering - Federal University of Technology, Owerri (FUTO) 2024 - 2029 (Expected)

WASSCE / NECO - Winners International School, Nkpor, Anambra State 2018 - 2024

LANGUAGES & INTERESTS

Languages: English (Fluent) · Igbo (Native)
Interests: Software Engineering · Security · Chess · Continuous Self-Learning
